Appendix 21. Transcriptional regulatory network diagram for TREs associated with mouse first intron regions.

The graphical representation was derived using GraphViz as described in Materials and Methods. The ellipses and diamonds represent individual genes divided into up-regulated (blue) and down-regulated (green) clusters. The boxes represent TREs, with arrows indicating gene-TRE associations. Note: This is a large-format figure and should be viewed at enhanced magnification to read the text in specific sections of the figure.
